

## Smart Account Script Notice

When you create an account in Tokenomica with Waves Keeper using a specific Waves wallet address, Tokenomica's Smart Account Script will be installed for this wallet address.

This script is required to:

- Add the address to Tokenomica's whitelist in order to allow transactions with other whitelisted users on our Digital Assets Exchange;
- Allow transactions with assets that are listed in Tokenomica;
- Allow Tokenomica to impose withdrawal limits as established in our [Fee Policy](#);
- Allow Tokenomica to suspend or close your account, or block funds on your account if this is required for compliance reasons.

To have a smooth experience using our Services, we recommend you using a newly created Waves wallet to create an account in Tokenomica.
